The book, 'The Dooples and the Shapes' is a book aimed at teaching children the mathematical concepts behind lines: parallel, curved, straight, thick or thin... and that they touch at points, form patterns and shapes.

The story takes 'shape' (no pun intended) as a group of writing implements as characters practice making shapes, awaiting their leader, Mr. Dooba Dee Doo. They strive to impress him with their new skills.

The book not only introduces mathematical concepts in a relevant way to engage and enhance learning, but also teaches collaboration, teamwork and the importance of risk-taking; all skills that are necessary in social interaction.

Your children will certainly enjoy this journey with the Dooples!
